

HOW TO PROGRAMME A BOL4 GARAGE DOOR OPENER

- Limits are preset at 2200mm opening height. This can be increased by screwing the **open and/or close limit adjustment**^① in the direction of the **arrow**^②.
- Alternatively the limits can be decreased by turning the **open and/or close limit adjustment**^① in the opposite direction of the **arrow**^②.
- To program a remote to this unit, press the **“RADIO SET” button**^③ for approximately 1-2 seconds to put the unit into learn mode. The light globe will flash twice. Then press the **desired button**^④ on the remote for 1-2 seconds to code it. The light globe will flash twice again to indicate it has accepted the remote.
